

Do you work with energy data and modelling ?

Are you interested in increasing openness in this field?

Join the 9th Open Energy Modelling Workshop !

22-24 May 2019

Aarhus University

The Openmod Workshop provides a forum for modellers to come together and discuss how to further the use of open data and open software tools in the energy modelling community. Topics range from exchanges about specific types of data (e.g. sources for open data on building stocks or distribution networks) to advocacy and outreach. Most of the time, participants work in groups on do-a-thons addressing specific topics. Moreover, scientific results from research are presented in poster sessions.

Join the forum and suggest and help develop ideas for the workshop sessions you would like to see.

Registration will open on **March 1st 2019**. Don't miss the date and keep informed via:
